

Sprint 3 – Quick meetings

1. Scrum meeting on 2022/08/26 @ 16:00

Summary:

After doing a release for sprint 2 we talked about what we will be doing in sprint 3. Everyone agreed that we will not add new features, sprint 3 will only consist of optimisation and refactoring of code. We decided that two drivers and two vehicles is sufficient for the minimum viable product (MVP). We decided that displaying the total energy per driver and the energy usage per second of each driver is sufficient for the MP. If time allows, we can still display the fuel consumption model.

Task assignment:

All group members will refactor and optimise their code. Nic will add labels to the figures on the front end. Van Niekerk will access the drag coefficient from the database, which will be configured by Ivan.

2. Scrum meeting on 2022/09/02 @ 15:00

Summary:

We met to end our third official sprint.

Task assignment:

All the members refactored their code. Some optimisations might still be done in the last week.
